## Interior Designer

## WORK HISTORY

### INTERIOR DESIGNER

*Bona Vita Architecture, 2019 to Present*

Assist owners and project managers with large scale projects such as Goshen Hospital Tower Addition, new YMCA facilities, Depuy and Do It Best Headquarters to name a few. Within these projects I assisted the project managers in creating construction documents in Revit Architecture with floor plans, plan details, window details, life safety plans and ceiling plans. I assisted the interior design department with creating all the finish sheets within the construction document set including casework elevation, casework sections, finish floor plans, finish selection and finish schedule. For each project I work closely with the architect in creating a photo realistic rendering to be able to present to the client using both Revit Architecture and Lumion.

### ASSISTANT INTERIOR DESIGNER

*Implied Design, 2017 to 2019*

Researched and compared future projects for clients.  
Design meetings with other designers to discuss client needs and budgets.  
Used Revit Architecture to create space plans and renderings for clients.  
Field verified areas for construction.  
Followed changes in industry trends and changing styles.  
Shopped for interior decorations for child care facilities, corporate offices and residential spaces.
